

Dr. Arjun Deb is a physician scientist and director of cardiovascular research at the University of California, Los Angeles, USA where his lab studies the biology of heart fibrosis and tissue repair. Prof. Deb's lab broadly investigates the biology of tissue repair and cardiac fibrosis and how common pathways of tissue repair can be targeted in multiple organs. His laboratory has identified fundamental regulators of fibrosis that can be targeted for therapeutic purposes. His laboratory also studies the interaction of cells that occur in the fibrotic niche in the heart, that can contribute to consequential cardiac phenotypes after cardiac injury.
