

Dr. Inna Rabinovich-Nikitin is an Assistant Professor at the Institute of Cardiovascular Sciences, St. Boniface Albrechtsen Research Centre, Winnipeg, MB, Canada. Her research program focuses on women's heart health, cardiometabolic function and circadian rhythm. Dr. Rabinovich-Nikitin studies the genes and networks that are associated with both circadian rhythms and cardiac function during pregnancy. One of her main interests is understanding the molecular mechanisms that underlie how circadian disruption leads to pregnancy complications and adverse cardiac outcomes in both the mother and fetus. Dr. Rabinovich-Nikitin has published in top journals, including *Circulation*, *Journal of Clinical Investigations*, *Circulation Research*, and *Nature Communication*. She serves on the editorial board of several prestigious journals, such as *Circulation Research*, and has received numerous prestigious research awards including the Louis N. and Arnold M. Katz Basic Science Research Prize from the American Heart Association (AHA), Martha Donovan Women's Leadership Development Award, and many others.
